

User

Predict key developability properties for the given SMILES and highlight the most likely liabilities.
`CCOC(=O)c1ccc(NC(=O)CN2CCOCC2)cc1`

Orchestrate Agent
(Planning & Dispatch)

Planning

1. Parse SMILES.
2. Calculate ADMET properties.
3. Evaluate & Compare.
4. Summarize findings.

Dispatch

Gauge Agent
(Tool Calling & Execution)

Task:

- ❑ Predict developability and ADMET properties for molecule...

Query
SMILES &
property lists

Tool Call: ADMET-AI
(calculate ADMET properties)

Tool Response:
Raw values & Percentiles (logP:1.13,
DILI prob: 0.612, QED: 0.824)

Report

Orchestrate Agent
(Review & Integration)

- ✓ Review Gauge's report.
- ✓ Integrate findings.
- ✓ Generate final summary.

Integration

Output

Final Answer (Developability Summary Report)

- Key Properties: Lipinski (Pass), QED (High).
- Liabilities: DILI Risk (High), Short Half-life, High Clearance.
- Conclusion: Good drug-likeness, but requires optimization for liver safety and stability.
- Task complete.
